

I claim:

1. A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and a massage element positioned on the container.
2. The container of claim 1 wherein the massage element is located at a first container end and the opening is located at a second container end.
3. The container of claim 2 wherein the opening is closed with a closure element that closes the opening of the container.
4. The container of claim 1 wherein the massage element is located at a first container end and is removable from the body in order to provide access to the opening of the container.
5. The container of claim 1 wherein the massage element is mounted perpendicular to the longitudinal axis of the body of the container.
6. The container of claim 5 wherein the body is received in a sidewall of the massage element.
7. The container element of claim 5 wherein the massage element is located at a first container end and the opening is located at a second container end.
8. The container element of claim 1 wherein the stored item is a pair of eyeglasses.
9. A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the

first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and a massage element located on the container.

- 5      10.    The container for storing items of claim 9 wherein the massage element is aligned perpendicular to the longitudinal axis of the body.
11.    The container for storing items of claim 9 wherein the massage element is aligned parallel to the longitudinal axis of the body.
- 10      12.    The container of claim 9 wherein the stored item is a pair of eyeglasses.
13.    A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and a personal digital assistant.
- 15      14.    The container of claim 13 wherein the opening is closed with a closure element that closes the opening of the container.
- 20      15.    The container of claim 1 wherein the stored item is a pair of eyeglasses.
16.    A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and a personal digital assistant located on the container.
- 25      17.    The container of claim 16 wherein the stored item is a pair of eyeglasses.

18. A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and a radio located on the container.

19. The container of claim 18 wherein the opening is closed with a closure element that closes the opening of the container.

20. The container of claim 18 wherein the stored item is a pair of eyeglasses.

21. A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and a radio located on the container.

22. The container of claim 21 wherein the stored item is a pair of eyeglasses.

23. A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and a MP3 player located on the container.

24. The container of claim 23 wherein the stored item is a pair of eyeglasses.

25. The container of claim 23 wherein the opening is closed with a closure element that closes the opening of the container.

26. A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and a MP3 located on the container.

27. The container of claim 26 wherein the stored item is a pair of eyeglasses.

28. A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and at least one cavity on an exterior side of the container.

29. The container of claim 28 wherein the stored item is a pair of eyeglasses.

30. The container of claim 28 wherein a plurality of cavities are provided on the exterior of the container.

31. The container of claim 28 wherein the cavity storing another item is selected from the group consisting of a screw driver, a pair of tweezers, a writing instrument, a pair of scissors.

32. The container of claim 28 wherein the cavities store items selected from the group consisting of a screw driver, a pair of tweezers, a writing instrument, a pair of scissors.

33. A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and at least one cavity on an exterior side of the container.

34. The container of claim 33 wherein a plurality of cavities are provided on the exterior of the container.

5 35. The container of claim 33 wherein the cavity storing another item is selected from the group consisting of a screw driver, a pair of tweezers, a writing instrument, a pair of scissors.

36. The container of claim 33 wherein the cavities store items selected from the group consisting of a screw driver, a pair of tweezers, a writing instrument, a pair of scissors.

10 37. The container of claim 33 wherein the stored item is a pair of eyeglasses.

15 38. A container for storing items comprised of a body defining an interior space for storing items, an opening through which the items can be stored in the body and removed therefrom, a closure that having a first open position permitting access to the first interior space and a second closed position closing the second interior space, and a fan.

20 39. The container of claim 38 wherein the opening is closed with a closure element that closes the opening of the container.

40. The container of claim 38 wherein the stored item is a pair of eyeglasses.

25 41. A container for storing items comprised of a body comprised of a first portion and a second portion, wherein the first portion and the second portion are joined together at a hinge, the first portion and second portion defining an interior space for storing items, that, when in the open state, permits access to the interior of the body, and when closed, closes the interior space, and a fan located on the container.

30 42. The container of claim 41 wherein the stored item is a pair of eyeglasses.
